1. INTENDED USE

AmpliSens[®] *HCV / HBV / HIV*-FRT PCR kit is an *in vitro* nucleic acid amplification test for simultaneous detection of hepatitis C virus RNA (*HCV*), hepatitis B virus DNA (*HBV*) and human immunodeficiency virus RNA (*HIV*) in the biological material using real-time hybridization-fluorescence detection of amplified products.

This kit can be used for analysis of both individual samples and several plasma samples combined in a minipool. For individual samples, the volume of plasma for nucleic acid extraction is 100, 200 or 1000 μ l. For mini-pools, the recommended volume of sample is 1000 μ l. The volume of each sample in mini-pool should be no less than 100 μ l. The recommended number of plasma samples, combined to mini-pool, is 4–10 with the resulting volume of 1000 μ l.

Extraction methods, volumes used for extraction, and the possibility of testing samples combined into mini-pools are specified in Table 1.

Table 1

Extraction method	Volumes of plasma used for RNA/DNA extraction, μl	Possibility of testing plasma mini-pools
NucliSENS	100	no
easyMAG	1,000	Up to 10 samples
	200	no
MAGNO-sorb	1,000	Up to 10 samples
QIAsymphony Virus/Bacteria Midi Kit	1,000	Up to 10 samples
RIBO-sorb	100	no
RIBO-prep	100	no

For research use only. Not for diagnostic procedures.

2. PRINCIPLE OF PCR DETECTION

Detection of hepatitis C virus RNA (*HCV*), hepatitis B virus DNA (*HBV*) and human immunodeficiency virus type 1 RNA (*HIV-1*) in biological material by using real-time hybridization-fluorescence detection includes the following stages: (1) RNA/DNA extraction from blood plasma together with Internal Control sample (IC) by means of QIAsymphony SP and NucliSENS easyMAG-automated systems or by means of manual extraction with RIBO-sorb, MAGNO-sorb or RIBO-prep kits; (2) reverse transcription of RNA and amplification of DNA/cDNA by using real-time hybridization-fluorescence detection. In the channel for the FAM fluorophore the *HCV* cDNA amplification product is detected. In the

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE, REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 3 of 20 channel for the ROX fluorophore the *HBV* DNA amplification product is detected. In the channel for the Cy5 fluorophore the IC amplification product is detected. In the channel for the Cy5.5 fluorophore the *HIV-2* cDNA amplification product is detected. The PCR kit variant FRT-4x is intended for the thermocyclers with four fluorescence detection channels. When using PCR kit variant FRT-4x the *HIV-2* cDNA is not being detected. The Positive Control of Extraction – Positive Control *HCV / HBV / HIV*-rec – is a complex control for 4 infections; it is detected in the channels for the FAM (*HCV*), JOE (*HIV-1*), ROX (*HBV*), Cy5 (IC) and Cy5.5 (*HIV-2*) fluorophores. The Positive Control of Amplification – Positive Control cDNA *HCV / HBV / HIV* (C+_{*HCV / HBV / HIV*) – is also a complex control for *HCV*, *HBV*, *HIV-1*, *HIV-2* and IC; it is detected in corresponding channels.}

3. CONTENT

AmpliSens[®] HCV / HBV / HIV-FRT is produced in 4 forms:

AmpliSens[®] *HCV / HBV / HIV-FRT* PCR kit variant FRT-A **REF** R-V62-Q(RG,Dt)-CE adopted for the QIAsymphony AS (QIAGEN, Germany) automatic module for reaction mixture preparation.

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit variant FRT REF R-V62(RG,Dt)-CE;

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit variant FRT-4x,

REF R-V50-4x(RG,iQ,Mx,Dt)-CE.

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit variant FRT-4x in bulk¹,

REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B.

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit variant FRT includes:

Reagent	Description	Volume, ml	Quantity
RT-G-mix-2	colorless clear liquid	0.015	4 tubes
RT-PCR-mix-1-FRT HCV/HBV/HIV1/ HIV2	clear liquid from colorless to light lilac colour	0.3	4 tubes
RT-PCR-mix-2-FL	colorless clear liquid 0.3		4 tubes
Polymerase (TaqF)	aqF) colorless clear liquid		4 tubes
TM-Revertase (MMIv)	colorless clear liquid	0.015	4 tubes
Buffer for elution	colorless clear liquid	1.2	4 tubes
Positive Control cDNA HCV/HBV/ HIV (C+ _{HCV/HBV/HIV})	colorless clear liquid	0.1	4 tubes
Negative Control (C–)*	colorless clear liquid	0.5	4 tubes

¹ In bulk form contains unlabeled tubes. Tubes with identical reagent are packed in one bag with label.

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE,

Reagent	Description	Volume, ml	Quantity
Positive Control HCV / HBV / HIV- rec**	colorless clear liquid	0.2	4 tubes
Internal Control STI-87-rec (IC)***	colorless clear liquid	0.5	4 tubes

* must be used in the extraction procedure as Negative Control of Extraction.

** must be used in the extraction procedure as Positive Control of Extraction.

*** add **10 μl** of **Internal Control STI-87-rec (IC)** during the RNA/DNA extraction procedure directly to the sample/lysis mixture

AmpliSens[®] *HCV / HBV / HIV-FRT* PCR kit variant FRT is intended for 100 reactions, including controls.

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit variant FRT-A includes:

Reagent	Description	Volume, ml	Quantity
RT-G-mix-2	colorless clear liquid	0.055	4 tubes
RT-PCR-mix-1-FRT HCV/HBV/HIV1/ HIV2	clear liquid from colorless to light lilac colour	0.35	4 tubes
RT-PCR-mix-2-FL	colorless clear liquid	0.35	4 tubes
Polymerase (TaqF)	colorless clear liquid	0.07	4 tubes
TM-Revertase (MMIv)	colorless clear liquid	0.055	4 tubes
Buffer for elution	colorless clear liquid	0.2	4 tubes
Positive Control cDNA HCV/HBV/ HIV (C+ _{HCV/HBV/HIV})	colorless clear liquid	0.1	4 tubes
Negative Control (C–)* colorless clear liquid		1.2	4 tubes
Positive Control HCV / HBV / HIV- rec**	colorless clear liquid	1.2	4 tubes
Internal Control STI-87-rec (IC)***	colorless clear liquid	0.5	4 tubes

* must be used in the extraction procedure as Negative Control of Extraction.

** must be used in the extraction procedure as Positive Control of Extraction.

*** add **10 μI** of **Internal Control STI-87-rec (IC)** during the RNA/DNA extraction procedure.

AmpliSens[®] *HCV / HBV / HIV-FRT* PCR kit variant FRT-A is intended for 100 reactions, including controls.

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit variant FRT-4x includes:

Reagent	Description	Volume, ml	Quantity
RT-G-mix-2	colorless clear liquid	0.015	4 tubes
RT-PCR-mix-1-FRT HCV/HBV/HIV	V/HBV/HIV clear liquid from colorless to light lilac colour 0.3		4 tubes
RT-PCR-mix-2-FL	colorless clear liquid	0.3	4 tubes

AmpliSens[®] *HCV / HBV / HIV-FRT* PCR kit variant FRT-4x is intended for 100 reactions, including controls.

4. ADDITIONAL REQUIREMENTS

- DNA/RNA extraction kit or RNA/DNA extraction automatic station.
- Disposable powder-free gloves and laboratory coat.
- Pipettes (adjustable).
- Sterile RNase-free pipette tips with aerosol filters (up to 200 µl).
- Tube racks.
- Vortex mixer.
- Desktop centrifuge with rotor for 2-ml reaction tubes.
- PCR box.
- For PCR kit variant FRT-A: QIAsymphony SP + AS (QIAGEN, Germany) automatic station for RNA/DNA extraction and reaction mixture preparation and consumable materials for QIAsymphony AS (QIAGEN, Germany) automatic module (filter tips up to 1,500, 200 and 50 μl).
- For PCR kit variant FRT-A and PCR kit variant FRT: Real-time instruments (for example, Rotor-Gene 3000 or Rotor-Gene 6000 (Corbett Research, Australia); CFX96 (Bio-Rad, USA) or equivalent) with possibility of simultaneous detection in five channels (corresponding to FAM, JOE, ROX, Cy5, Cy 5.5 fluorescent dyes).

For PCR kit variant FRT-4x: Real-time instruments (for example, Rotor-Gene 3000 or Rotor-Gene 6000 (Corbett Research, Australia); CFX96 (Bio-Rad, USA) or equivalent) with possibility of simultaneous detection in four or more channels (corresponding to FAM, JOE, ROX, Cy5 fluorescent dyes).

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE, REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 6 of 20

- Disposable polypropylene tubes for PCR (0.1- or 0.2-ml)
 - a) 0.2-ml PCR tubes or strips with domed caps (for example, Axygen, USA) if a platetype instrument is used;
 - b) 0.2-ml PCR tubes (flat caps, nonstriped) (for example, Axygen, USA) for 36-well rotor or 0.1-ml tubes (Corbett Research, Australia) for 72-well rotor if a rotor-type instrument is used.
- Refrigerator at the temperature from 2 to 8 °C.
- Deep-freezer at the temperature from minus 24 to minus 16 °C.
- Reservoir for used tips.

5. GENERAL PRECAUTIONS

The user should always pay attention to the following:

- Use sterile pipette tips with aerosol filters and use a new tip for every procedure.
- Store all extracted positive material (samples, controls and amplicons) away from all other reagents and add it to the reaction mix in a distantly separated facility.
- Thaw all components thoroughly at room temperature before starting an assay.
- When thawed, mix the components and centrifuge briefly.
- Use disposable protective gloves and laboratory cloths, and protect eyes while samples and reagents handling. Thoroughly wash hands afterward.
- Do not eat, drink, smoke, apply cosmetics, or handle contact lenses in laboratory work areas.
- Do not use a kit after its expiration date.
- Dispose of all samples and unused reagents in accordance with local regulations.
- Samples should be considered potentially infectious and handled in a biological cabinet in accordance with appropriate biosafety practices.
- Clean and disinfect all samples or reagents spills using a disinfectant, such as 0.5 % sodium hypochlorite or another suitable disinfectant.
- Avoid samples and reagents contact with the skin, eyes and mucous membranes. If these solutions come into contact, rinse the injured area immediately with water and seek medical advice immediately.
- Material Safety Data Sheets (MSDS) are available on request.
- Use of this product should be limited to personnel trained in the DNA amplification techniques.
- Workflow in the laboratory must be one-directional, beginning in the Extraction Area and moving to the Amplification and Detection Area. Do not return samples, equipment,

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE, REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 7 of 20 and reagents to the area where the previous step was performed.

Some components of this kit contain sodium azide as a preservative. Do not use metal tubing for reagent transfer.

6. SAMPLING AND HANDLING

Obtaining samples of biological materials for PCR-analysis, transportation and storage are described in the manufacturer's handbook [1]. It is recommended that this handbook is read before starting work.

Analysis is performed with peripheral blood plasma. Blood is obtained after overnight fasting to tube with EDTA solution as anticoagulant. Turn the closed tube several times. Plasma should be transferred to a new tube within 6 h after bleeding. This is performed by centrifuging the tube with blood at 800–1600 g for 20 min. Plasma can be stored for no more than 5 days at 2–8°C and for a long time at \leq –68°C.

In some cases, blood serum can be used. The analytical sensitivity of the reagent kit for this material is the same, but the clinical sensitivity may greatly decrease because of sedimentation of viral particles as a result of retraction of the clot. Store blood serum for no more than 5 days at 2–8 °C and for a long time at \leq –68°C.

This kit can be used for analyzing both individual samples and several plasma samples combined into a mini-pool. The recommended number of plasma samples for pooling is 4-10 (the resulting volume, 1000 µl).

7. WORKING CONDITIONS

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit should be used at 18–25 °C.

8. PROTOCOL

8.1. RNA/DNA extraction

It is recommended to use the following nucleic acid extraction kits:

- RIBO-sorb, REF K2-1-Et-100-CE;
- **RIBO-prep**, **REF** K2-9-Et-100-CE;
- MAGNO-sorb, REF K2-16-1000-CE.

QIAsymphony SP and NucliSENS easyMAG automated system can be used.

If using RIBO-prep kit, extract the RNA/DNA according to the manufacturer's protocol taking into account next additions and improvements:

It is allowed to mix the Solution for lysis and Internal Control STI-87-rec (IC) in a separate sterile vial (300 µl of Solution for lysis and 10 µl of Internal Control STI-87-rec (IC) per sample) and then transfer 300 µl of mixture to each prepared 1.5-ml tube to simplify the extraction procedure in case of great quantity of samples.

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE, REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 8 of 20 To prepare the Positive Control of extraction, PCE, add 100 µl of the Positive Control HCV / HBV / HIV-rec sample to a tube containing Solution for Lysis.

If using RIBO-sorb kit, extract the RNA/DNA according to the manufacturer's protocol taking into account next additions and improvements:

- Add **10** µl of Internal Control STI-87-rec (IC) to each tube and then add **450** µl of Lysis Solution.
- It is allowed to mix the Lysis Solution and Internal Control STI-87-rec (IC) in a separate sterile vial (450 µl of Lysis Solution and 10 µl of Internal Control STI-87-rec (IC) per sample) and then transfer 450 µl of mixture to each prepared 1.5-ml tube to simplify the extraction procedure in case of great quantity of samples.
- To prepare the Positive Control of extraction, PCE, add 100 µl of the Positive Control HCV / HBV / HIV-rec sample to a tube containing Lysis Solution.

 $\hat{\mathbb{N}}$

If using the MAGNO-sorb kit extract the RNA/DNA according to the manufacturer's protocol taking into account next additions and improvements:

- In case of RNA/DNA extraction from blood plasma sample of 1000 µl, the volume of the Internal Control STI-87-rec (IC) required for 24-tube panel is 0.28 ml. In case of other panels and RNA/DNA extraction from blood plasma sample of 200 µl see MAGNO-sorb instruction manual.
- To prepare the Positive Control of extraction, PCE, add 100 µl of the Positive Control HCV / HBV / HIV-rec sample to a tube containing Lysis Solution MAGNO-sorb.
- To prepare the Negative Control of extraction, C-, add 100 µl of the Negative Control (C-) sample to a tube containing Lysis Solution MAGNO-sorb.
- The volume of **Buffer for elution** required for extraction from both 1000 and 200 µl of blood plasma samples is **70 µl**.

If using the QIAsymphony SP automated system extract the RNA/DNA according to the Guidelines [2].

8.2. Preparing reverse transcription and PCR

Total reaction volume is 50 μ I, the volume of RNA/DNA sample is 30 μ I.

RNase-free and Dnase-free plastic ware should be used only.

8.2.1 Preparing tubes for RT-PCR

Variant FRT

Tubes type depends on the thermocycler used. Use filter tips for transferring the reagents and samples into the tubes.

All components of the reaction mixture should be mixed immediately before use.

1. Before starting work, thaw and thoroughly vortex all reagents of the kit. Sediment the drops from the tubes caps.

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE, REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 9 of 20

- 2. Take the required number of PCR-tubes for clinical and control samples (2 controls of the extraction stage and 2 controls of amplification stage). The type of tubes, strips or plates depends on the real-time PCR instrument used for analysis.
- 3. Prepare the reaction mixture (see Table 1) for the required number of reactions including the analysis of test and control samples.

Table 1

		Reagent vo	• •	cified numbe extra volume	er of PCR re	actions with
-	: volume per 1 iction, μl	10.00	10.00	1.00	0.50	0.50
Number of clinical samples	Number of PCR reactions ²	RT-PCR-mix- 1-FRT HCV/ HBV/HIV1/ HIV2	-	Polymerase (TaqF)	RT-G-mix- 2	TM-Revertase (MMIv)
6	10	110	110	11	5	5
8	12	130	130	13	6	6
10	14	150	150	15	7	7

20	24	250	250	25	12	12
22 ³	26	Whole tube content	Whole tube content	Whole tube content	15	Whole tube content

Reaction mixture preparation

- 4. For analysis of 22 clinical samples (24 samples after extraction procedure) the following method is recommended: transfer the whole volume of RT-PCR-mix-2-FL (0.3 ml), the whole volume of polymerase (TaqF) (0.03 ml), the whole volume of TM-Revertase (MMIv) (0.015 ml) and the whole volume of RT-G-mix-2 (0.015 ml) into the tube with RT-PCR-mix-1-FRT HCV / HBV / HIV1 / HIV2 (0.3 ml). Thoroughly mix by vortexing and sediment the drops from the tubes caps.
- 5. Add **20 µl** of prepared reaction mixture into each PCR-tube. Discard the remaining mixture.
- 6. Using filter tips add **30 μI** of RNA/DNA-sample to reaction mixture. Thoroughly mix the content by pipetting avoiding foaming.
- 7. Carry out the control amplification reactions:
- C+ Add 30 μI of Positive Control cDNA HCV / HBV / HIV (C+_{HCV / HBV / HIV}) to the tube labeled C+.

² Number of clinical samples + 2 controls for RNA extraction stage + 2 controls of RT-PCR (N+4, N – number of clinical samples).

³ Typical extraction from 24 samples using NucliSENS easyMAG automated system or MAGNO-sorb nucleic acids extraction kit.

- NCA Add 30 µl of Buffer for elution to the tube labeled NCA.
- C–
- Add 30 µl of the sample extracted from the Negative Control (C–) reagent to the tube labeled C– (Negative control of Extraction).
- PCE
- Add 30 µl of the sample extracted from the Positive Control HCV/HBV/ HIV-rec reagent to the tube labeled PCE (Positive control of Extraction).

Tubes with control samples are to be mixed by pipetting avoiding foaming.

Variant FRT-A

PCR kit variant FRT-A is adopted for the QIAsymphony AS (QIAGEN, Germany) automatic module for reaction mixture preparation. Preparing the reaction mixtures, adding the RNA/DNA samples and controls into the tubes with reaction mixture are performed automatically. The AmpliSens_RG protocol, preset in the instrument, should be used for **AmpliSens**[®] *HCV / HBV / HIV*-FRT PCR kit. The work with the QIAsymphony AS automatic module is to be carried out in accordance with the instrument manual.

Thaw and thoroughly mix on vortex all reagents of the kit before work. Sediment the drops from the tubes caps. Take the required number of tubes for amplification of clinical and control samples.

The control amplification reactions (C+ and NCA) are allowed to be omitted in case of reaction mixtures preparation with the use of automatic module.

Variant FRT-4x

Tubes type depends on the thermocycler used. Use filter tips for transferring the reagents and samples into the tubes.

All components of the reaction mixture should be mixed immediately before use.

- 1. Before starting work, thaw and thoroughly vortex all reagents of the kit. Sediment the drops from the tubes caps.
- 2. Take the required number of PCR-tubes for clinical and control samples (2 controls of the extraction stage and 2 controls of amplification stage). The type of tubes, strips and plates depends on the real-time PCR instrument used for analysis.
- 3. Prepare the reaction mixture (see Table 2) for the required number of reactions including the analysis of test and control samples.

Table 2

	Reaction mixture preparation					
	Reagent volume per specified number of PCR reactions with extra volum					extra volume
•	volume for ction, µl	10.00	10.00	1.00	0.50	0.50
Number of clinical samples	Number of PCR reactions ⁴	RT-PCR-mix-1- FRT <i>HCV / HBV / HIV</i>	RT-PCR-mix-2- FL	Polymerase (TaqF)	RT-G- mix-2	TM- Revertase (MMIv)

- 4. For analysis of 22 clinical samples (24 samples after extraction procedure) the following method is recommended: transfer the whole volume of RT-PCR-mix-2-FL (0.3 ml), the whole volume of polymerase (TaqF) (0.03 ml), the whole volume of TM-Revertase (MMIv) (0.015 ml) and the whole volume of RT-G-mix-2 (0.015 ml) into the tube with RT-PCR-mix-1-FRT HCV / HBV / HIV (0.3 ml). Thoroughly mix by vortexing and sediment the drops from the tubes caps.
- 5. Add **20 µl** of prepared reaction mixture into each PCR-tube. Discard the remaining mixture.
- 6. Using filter tips add **30 μl** of RNA/DNA-sample to reaction mixture. Mix the content by pipetting avoiding foaming.
- 7. Carry out control amplification reactions:
- C+ Add 30 μl of Positive Control cDNA HCV / HBV / HIV (C+_{HCV / HBV / HIV}) to the tube labeled C+.
- NCA Add 30 μ I of Buffer for elution to the tube labeled NCA.
- C- Add 30 μl of the sample extracted from the Negative Control (C-) reagent to the tube labeled C- (Negative control of Extraction).
- PCE Add 30 μl of the sample extracted from the Positive Control HCV/HBV/ HIV-rec reagent to the tube labeled PCE (Positive control of Extraction).

Tubes with control samples are to be mixed by pipetting avoiding foaming.

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE,

REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / **VER** 09.06.12–24.04.18 / Page 12 of 20

⁴ Number of clinical samples + 2 controls for RNA extraction stage + 2 controls of RT-PCR (N+4, N – number of clinical samples).

⁵ Typical extraction from 24 samples using NucliSENS easyMAG automated system or MAGNO-sorb nucleic acids extraction kit.

8.2.2. Amplification

1. Create a temperature profile on your instrument as follows (see Tables 3, 4):

Table 3

•				
Step	Temperature, °C	Time	Fluorescence detection	Cycle repeats
1	50	20 min	-	1
2	95	15 min	_	1
2	95	20 s	_	4
3	46	40 s	-	4
	95	5 s	_	
4	60	40 s	_	42
4	45	30 s	FAM, JOE, ROX, Cy5, Cy5.5	42

AmpliSens HBV / HCV / HIV amplification program for rotor-type instruments⁶

When using PCR kit variant FRT-4x the channel for the Cy5.5 fluorophore is not used.

Table 4

AmpliSens HBV / HCV / HIV amplification program for plate-type instruments⁷

Step	Temperature, °C	Time	Time Fluorescence detection	
1	50	20 min	-	1
2	95	15 min	-	1
3	95	20 s	-	4
5	46	40 s	_	4
	95	5 s	_	
4	60	40 s	-	42
T	40	40 s	FAM, JOE, ROX, Cy5, Cy5.5	

When using PCR kit variant FRT-4x the channel for the Cy5.5 fluorophore is not used.

- 2. Adjust the fluorescence channel sensitivity according to the *Important Product Information Bulletin* and Guidelines [2].
- 3. Insert tubes into the reaction module of the device.

It is recommended to sediment drops from walls of tubes by short centrifugation (1–3 s) before placing them into the plate-type instrument.

- 4. Run the amplification program with fluorescence detection.
- 5. Analyze results after the amplification program is completed.

DATA ANALYSIS

The results are interpreted by the real-time PCR instrument software:

REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 13 of 20

⁶ For example, Rotor-Gene 3000 and Rotor-Gene 6000 (Corbett Research, Australia).

⁷ For example, CFX96 (Bio-Rad, USA).

REF R-V62-Q(RG,Dt)-CE; **REF** R-V62(RG,Dt)-CE; **REF** R-V50-4x(RG,iQ,Mx,Dt)-CE,

- HCV cDNA amplification product is detected in the channel for the FAM fluorophore.
- *HIV*-1 cDNA amplification product is detected in the channel for the JOE fluorophore.
- *HBV* DNA amplification product is detected in the channel for the ROX fluorophore.
- IC cDNA amplification product is detected in the channel for the Cy5 fluorophore.
- *HIV*-2 cDNA amplification product is detected in the channel for the Cy5.5 fluorophore.

The results are interpreted by the crossing (or not crossing) the threshold line by the fluorescence curve that indicates the presence (or absence) of the threshold *Ct* value in corresponding column in the results table.

The result of amplification is considered *positive* if the fluorescence S-shaped curve (typical for real-time PCR) crosses once the threshold line in the fluorescence reliable growth area; and the threshold value (*Ct* or *Cp*) for respective channel is less than the *Ct* value specified in the *Important Product Information Bulletin*.

The result of amplification is considered *negative* if the fluorescence curve is not S-shaped or does not cross the threshold line (*Ct* or *Cp* values are absent).

Otherwise, the result of amplification is considered equivocal.

For details, see Instruction Manuals for appropriate instruments and Guidelines [2].

The sample is considered positive for *HBV* DNA, *HCV* RNA, *HIV*-1 RNA and *HIV*-2 RNA if the *Ct* value defined in respective channel is less than the boundary *Ct* value specified in the *Important Product Information Bulletin* and the *Ct* value in the Cy5 channel is less than the specified boundary *Ct* value.

The sample is considered negative for *HBV* DNA, *HCV* RNA, *HIV-1* RNA and *HIV-2* RNA if the *Ct* value defined in respective channel is absent or greater than the boundary *Ct* value specified in the *Important Product Information Bulletin* and *Ct* value in Cy5 channel is less than the specified boundary *Ct* value.

Boundary *Ct* values are specified in the *Important Product Information Bulletin* enclosed in the PCR kit.

When using PCR kit variant FRT-4x the channel for the Cy 5.5 fluorophore is not used and the analysis for this channel is not performed.

The results of the analysis are considered reliable only if the results for control samples are correct (see Table 5).

Control	Ct in the channel for the fluorophore						
Control	FAM	JOE	ROX	Cy5	Cy5.5		
C-	absent	absent	absent	≤ Ct value specified in the bulletin (positive)	absent		
PCE	≤ Ct value specified in the bulletin (positive)	≤ <i>Ct</i> value specified in the bulletin (positive)					
NCA	absent	absent	absent	absent	absent		
C+	≤ Ct value specified in the bulletin (positive)						

Results for controls

For boundary (maximum) values see Important Product Information Bulletin.

10. TROUBLESHOOTING

- If the *Ct* value in the channels FAM, JOE, ROX or Cy5.5 is greater than the boundary *Ct* value and the *Ct* value in the Cy5 channel is also greater than the boundary *Ct* value, PCR should be repeated for this sample starting from the RNA/DNA extraction stage.
- If the *Ct* value for the Positive Control of Extraction (PCE) or Positive Control of Amplification (C+) in any channel is absent or greater than the specified boundary *Ct* value, PCR should be repeated for all the samples starting from the RNA/DNA extraction stage.
- If the *Ct* value is present for the Negative Control of Extraction (C–) in FAM, JOE, ROX, Cy5.5 channels and/or Negative Control of Amplification (NCA) in any channel, PCR should be repeated for all positive samples starting from the RNA/DNA extraction stage.

11. TRANSPORTATION

AmpliSens[®] HCV / HBV / HIV-FRT PCR kit should be transported at 2–8 °C for no longer than 5 days.

12. STABILITY AND STORAGE

All components of the **AmpliSens[®]** *HCV / HBV / HIV*-FRT PCR kit are to be stored at temperature from minus 24 to minus 16 °C when not in use. All components of the **AmpliSens[®]** *HCV / HBV / HIV*-FRT PCR kit are to be stable until labeled expiration date.

REF R-V62-Q(RG,Dt)-CE; REF R-V62(RG,Dt)-CE; REF R-V50-4x(RG,iQ,Mx,Dt)-CE, REF R-V50-4x(RG,iQ,Mx,Dt)-CE-B / VER 09.06.12–24.04.18 / Page 15 of 20 The shelf life of reagents before and after the first use is the same, unless otherwise stated.

RT-PCR-mix-1-FRT *HCV / HBV / HIV*1 / *HIV*2 and RT-PCR-mix-1-FRT *HCV / HBV / HIV* are to be kept away from light

13. SPECIFICATIONS

13.1. Sensitivity

Analytical sensitivity of **AmpliSens[®] HCV / HBV / HIV-FRT** PCR kit is presented in the table below.

Volume of sample	Method of extraction	Analytical sensitivity			
for extraction, µl		<i>HCV</i> , IU/ml	<i>HBV</i> , IU/ml	<i>HIV</i> -1, copies/ml	HIV-2*, copies/ml
100	RIBO-sorb RIBO-prep NucliSENS easyMAG	100	50	200	600
200	MAGNO-sorb	50	25	100	300
1000	MAGNO-sorb NucliSENS easyMAG QIAsymphony Virus/Bacteria Midi Kit	10	5	20	60

* When using PCR kit variant FRT-4x the HIV-2 RNA is not being detected.

The claimed analytical features of **AmpliSens[®] HCV/ HBV/ HIV-FRT** PCR kit are guaranteed only when additional reagents kits RIBO-sorb, RIBO-prep, MAGNO-sorb (manufactured by Federal Budget Institute of Science "Central Research Institute for Epidemiology"), or QIAsymphony SP or NucliSENS easyMAG automated system kit are used.

13.2. Specificity

The analytical specificity of **AmpliSens[®] HCV / HBV / HIV-FRT** PCR kit is ensured by selection of specific primers and probes and stringent reaction conditions. The primers and probes were tested for possible homologies to all sequences deposited in gene banks by sequence comparison analysis as well as with genomic DNA/RNA of the following organisms and viruses: hepatitis A virus; hepatitis D virus; cytomegalovirus; Epstein-Barr virus; herpes simplex virus types 1 and 2; *Varicella-Zoster virus*; human herpes virus types 6 and 8; parvovirus B19; tick-borne encephalitis virus; *West Nile virus*; adenovirus types 2, 3, and 7; *Escherichia coli*; *Staphylococcus aureus; Streptococcus pyogenes, S.agalactiae;* and *Homo sapiens*.

Guidelines to AmpliSens[®] HCV / HBV / HIV-FRT PCR kit for simultaneous detection of hepatitis C virus RNA (HCV), hepatitis B virus DNA (HBV) and human immunodeficiency virus RNA (HIV) in the biological material by the polymerase chain reaction (PCR) with real-time hybridization-fluorescence detection developed by Federal Budget Institute of Science "Central Research Institute for Epidemiology".

15. QUALITY CONTROL

In compliance with Federal Budget Institute of Science "Central Research Institute for Epidemiology" ISO 13485-Certified Quality Management System, each lot of **AmpliSens**[®] *HCV I HBV I HIV*-FRT PCR kit has been tested against predetermined specifications to ensure consistent product quality.
